FIGHTING FIRES BY DESIGN

ROUND ROCK, TX, June 23, 2011 - KAHickman Architects and Interior Designers, a 28 year old Texas architectural design firm, has been retained to build a brand new community fire station in Montgomery County, TX. The new Station #11-4, serving the Montgomery County ESD #8, will host 4 bays and be tastefully designed to look like a one or two-story brick and stone house, blending in with homes in the local community.

KAHickman was chosen based on their extensive experience in fire station design and award winning attention to detail. This will be the second fire station for Montgomery County #8 that KAHickman has been hired to build, adding to the numerous list of repeat clients the firm does business for.

Keith Hickman, Founder and Principal of KAHickman Architects, is LEED certified and makes ecologically friendly design a priority, reflecting the purpose of the community: to enhance communities, enrich lives, and create extraordinary environments.
